

Extension simulation scenarios (representative dependencies)

a Order-1 unconfounded

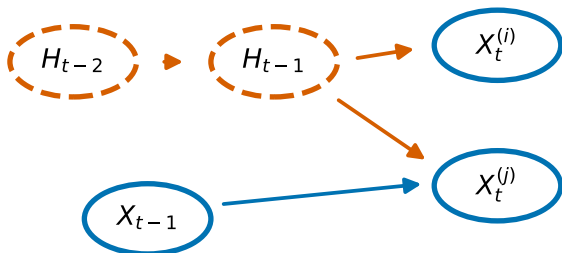

$X_t = A_1 X_{t-1} + \varepsilon_t$
retained; 10/10 repeats passed QC

b Order-3 unconfounded

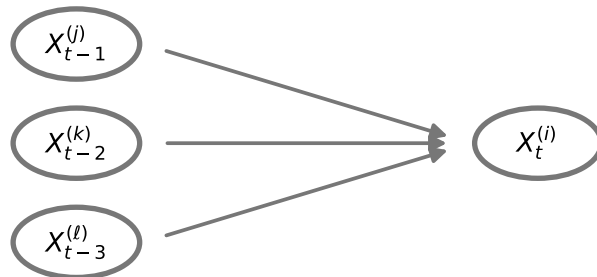

three sparse lag matrices
QC-excluded: 3/10 explosive repeats

c Latent common driver

$H_t = 0.8H_{t-1} + \eta_t$; $X_t = A_1 X_{t-1} + wH_{t-1} + \varepsilon_t$
retained; 10/10 repeats passed QC

d Variable-lag unconfounded

lower-density sparse order-3 variant
QC-excluded: 3/10 explosive repeats
